	Indice analitico / <i>Subject index</i> .....	5.5.1 – 5.5.2

**Sistema integrato di profili, accessori e guarnizioni a taglio termico** con profili aventi sezione di 65 mm e/o 73.5 mm, idoneo per la realizzazione di porte e finestre, rettangolari, sagomate o curve con o senza fissi laterali e superiori.

**I profili in metallo** componenti il sistema sono dello spessore di 15/10 mm e sono ottenuti tramite profilatura a freddo di nastri nei vari materiali previsti dal sistema.

**Il taglio termico dei profili** è realizzato tramite un estruso in poliammide rinforzato con fibra di vetro reso solidale alle parti in metallo esterne da una resina poliuretana ad alta densità, iniettata ad alta pressione. Il collegamento che si ottiene è continuo, privo di interruzioni e garantisce la massima resistenza torsionale e flettente.

**La costruzione dei telai** prevede l'unione tra i profili tramite saldatura in continuo delle sezioni in contatto e la successiva ripresa delle superfici in vista, o l'utilizzo di un sistema misto ad assiemaggio meccanico a saldatura interna che non necessita di riprese di finitura.

Il sistema prevede al possibilità di alloggiare vetri singoli o stratificati (di sicurezza) a una o più camere.

#### Sistema porte:

Complanarità delle ante;

Doppia guarnizione di tenuta per elevate caratteristiche prestazionali e acustiche;

Completa dotazione di accessori negli stessi materiali del profilo;

Cerniere a saldare, avvitare e a scomparsa per grandi portate;

Maniglie con diverse soluzioni estetiche;

Paraspifferi inferiore con guarnizione a pinna.

#### Sistema finestre:

Complanarità esterna e sormonto interno delle ante;

Sistema di guarnizioni a giunto aperto per le massime prestazioni di resistenza all'aria, acqua e vento ed elevati valori di resistenza acustica;

Idonea camera porta-accessori per l'alloggiamento di ferramenta certificata e per la riduzione dei tempi di lavorazione;

Sistema integrato completo di accessori per lo scarico acqua;

Completa dotazione di accessori:

Ferramenta per apertura ad anta, anta ribalta, vasistas per serramenti rettangolari, trapezoidali e curvi fino a 150 kg;

Ferramenta per cerniere a scomparsa.

**Integrated system of thermally broken profiles, hardware and gaskets with 65 mm and 73.5 mm sections**, suitable for rectangular, profiled or arched doors and windows, with or without sidelights and upper lights.

**The metal profiles** that make up the system are 15/10 mm thick and are obtained from the cold-forming of the coils in the various materials available.

**The thermal break** of the profiles is realized with an extruded polyamide reinforced with fibre-glass that is collocated flush with the external parts in metal by means of a high-density polyurethane resin injected at high pressure. The result is a seamless connection without interruptions which guarantees maximum resistance to torsional and bending stress.

**For frame assembly the profiles** must be joined by welding the sections in contact with each other, or by mechanically assembling and then internally welding which does not need finishing touches. Double or triple thermally insulated glazing may be used with single or stratified (safety) glass.

#### Doors system:

coplanarity of the doors;

double sealing gasket for high performance and acoustics;

complete with accessories in same material as profile;

hinges to be welded, screwed or concealed for large capacities;

selection of handles with different aesthetic solutions;

lower seal with fin.

#### Windows system:

external coplanarity and internal overlap of the leaves;

system of open joint gaskets for maximum resistance to air, water and wind, as well as high levels of acoustic resistance;

hardware container to keep all certified hardware and reduce time required for tooling;

integrated system complete with accessories for drainage of water; all accessories furnished;

hardware for side hung opening, tilt and turn, bottom-hung windows for rectangular, trapezoidal and arched fixtures up to 150 kg. hardware for concealed hinge

### **PRESTAZIONI**

#### Sistema finestre

Trasmittanza termica (UNI EN 10077-2)

-Nodo tipo (acciaio inox) con  $U_f=2,7 \text{ W/m}^2\text{K}$

-Finestra tipo (1230x1480 mm con  $U_g1,0$ )  $U_w=1,5 \text{ W/m}^2\text{K}$

Isolamento acustico (UNI EN 717-1)

-Fino a 47 dB

Resistenza all'aria (UNI EN 12207)

-Classe 4

Resistenza all'acqua (UNI EN 12208)

-Classe 9A

Resistenza al vento (UNI EN 12210)

-Classe C5

Resistenza alla forza di azionamento (UNI EN 13115)

-Classe 1 – < 100 N

Prova carico verticale e torsione statica (UNI EN 13115)

-Classe 4 – 800 N / 350 N

Prova di durata a cicli di apertura (UNI EN 12400)

-Classe 2 - 10.000 cicli

### **PERFORMANCES**

#### Windows system

Thermal transmittance (UNI EN 10077-2)

-Typical section (stainless steel) with  $U_f=2,7 \text{ W/m}^2\text{K}$

-Typical window (1230x1480 mm with  $U_g1,0$ )  $U_w=1,5 \text{ W/m}^2\text{K}$

Acoustic insulation (UNI EN 717-1)

-Up to 47 dB

Air resistance (UNI EN 12207)

-Class 4

Watertightness (UNI EN 12208)

-Class 9A

Resistance to wind load (UNI EN 12210)

-Class C5

Resistance to drive force (UNI EN 13115)

-Class 1 – < 100 N

Test for vertical load and static torsion (UNI EN 13115)

-Class 4 – 800 N / 350 N

Resistance to repeated opening and closing (UNI EN 12400)

-Class 2 - 10,000 opening and closing

- AC1037ST inox satinato | satined stainless steel
- AC1037L inox lucido | polished stainless steel
- AC1037B inox brunito | burnished stainless steel

### AC1037.

Cerniera a stilo ad avvitare con viti e rinforzi per porta  
Peso massimo anta: 250 kg

*Hinge to be screwed with screws and strengtheners for door  
Maximum leaf weight: 250 kg*

AISI 304

### AC 1020M

Supporto per spessore vetro  
Vetro da 23 a 44 mm

*Glass spacer  
Glass from 23 to 44 mm*

### AC 1020R

Supporto per spessore vetro  
Vetro fino a 22 mm

*Glass spacer  
Glass up to 22 mm*

### AC 1037/R

Rinforzo cerniera AC1037 su profili ridotti

*Reinforcement for hinge AC1037 on reduced profiles*

- AC1033IZ inox verniciabile | paintable stainless steel
- AC1033SB inox scotch brite | scotch brite st. steel
- AC1033ST inox satinato | satined stainless steel
- AC1033L inox lucido | polished stainless steel
- AC1033B inox brunito | burnished stainless steel
- AC1033CZ corten grezzo | untreated corten steel
- AC1033CT corten trattato | treated corten steel

### AC1033.

Cerniera a stilo ad avvitare con viti e rinforzi per porta  
Peso massimo anta: 160 kg

*Screw-on hinge with screws and strengtheners for door  
Maximum leaf weight: 160 kg*

AISI 304

### AC 1039

Kit cremonese per chiusura orizzontale su sporgere

*Cremona bolt set for horizontal awning closing*

### AC 1033/R

Rinforzo cerniera AC1033 su profili ridotti

*Reinforcement for hinge AC1033 on reduced profiles*

### AC 1040

Kit chiusura porte seconda anta  
Acciaio inox

*Second leaf door closing kit  
Stainless steel*

### AC 1046

Coppia compassi apertura a sporgere  
Acciaio inox  
Peso massimo anta: 75 kg

*Pair of side arms for awning opening  
Stainless steel  
Maximum leaf weight: 75 kg*

### AC 1067W D-S

Serratura multipunto  
Altezza anta oltre 2900 mm

*Multipoint lock  
Leaf height over 2900 mm*

### AC 1046M

Coppia compassi apertura a sporgere  
Acciaio inox  
Peso massimo anta: 120 kg

*Pair of side arms for awning opening  
Stainless steel  
Maximum leaf weight: 120 kg*

### AC 1070

Serratura con scrocco e catenaccio

*Lock with spring latch and bolt*

### AC 1058

Cerniera a scomparsa per porta  
Peso massimo anta: 180 kg  
Massima apertura: 96°

*Concealed hinge for door  
Maximum leaf weight: 180 kg  
Maximum opening: 96°*

### AC 1071

Serratura con rullo e catenaccio

*Lock with roller and bolt*

### AC 1065W D-S

Serratura multipunto  
Altezza anta da 2000 a 2300 mm

*Multipoint lock  
Leaf height from 2000 to 2300 mm*

### AC 1066W D-S

Serratura multipunto  
Altezza anta da 2301 a 2900 mm

*Multipoint lock  
Leaf height from 2301 to 2900 mm*

### AC 1072

Elettroserratura

*Electric lock*

### AC 1075

Deviatore per triplice chiusura

*Deviator for three-point lock*

### AC 1215

Kit inversione battuta finestra A/R a due ante - nodo ZTZ

*Reverse closing 2nd-leaf  
Tilt&Turn window - ZTZ profiles*

AC1215 acciaio zincato | *galvanized steel*  
AC1215CZ acciaio corten | *corten steel*  
AC1215I acciaio inox | *stainless steel*  
AC1215B inox brunito | *burnished stainless steel*

### AC 1080I

Rostro di sicurezza in acciaio inox  
Completo di viti e rinforzi

*Stainless steel security pin  
With screws and strengtheners*

### AC 1219.

Scarico acqua per aperture interne in metallo

*Metal drip for inward openings*

AC1219IZ inox verniciabile | *paintable stainless steel*  
AC1219SB inox scotch brite | *scotch brite st. steel*  
AC1219L inox lucido | *polished stainless steel*  
AC1219B inox brunito | *burnished stainless steel*  
AC1219CZ corten grezzo | *untreated corten steel*

### AC 1219NE

Scarico acqua per aperture interne in plastica nera

*Black plastic drip for inward openings*

### AC 1081

Paraspiffero automatico a ghigliottina

*Guillotine type draught excluder*

Dimensioni anta | *Leaf dimension*

AC1081/A: 615 → 730 mm  
AC1081/B: 715 → 830 mm  
AC1081/C: 815 → 930 mm  
AC1081/D: 915 → 1030 mm  
AC1081/E: 1015 → 1130 mm  
AC1081/F: 1115 → 1230 mm

### AC 1221.

Cerniera in acciaio inox a tre ali ad avvitare per vasistas  
Peso massimo anta: 70-100 kg

*Stainless steel hinge to be  
screwed for bottom-hung  
window  
Maximum leaf weight: 70-100 kg*

AC1221SB inox scotch brite | *scotch brite st. steel*  
AC1221L inox lucido | *polished stainless steel*  
AC1221B inox brunito | *burnished stainless steel*

AISI 316

### AC 1081 AT

Accessorio di battuta

*Stop accessory*

### AC 1223I

Cricchetto ed incontro da avvitare in acciaio inox, per vasistas

*Screw-in latch and plate in  
stainless steel, for bottom-hung  
windows*

### AC 1231S

Cricchetto ed incontro da avvitare in nylon nero, per vasistas

*Screw-in latch and plate in black nylon, for bottom-hung windows*

### AC 1714.

Kit inversione battuta per finestra a due ante con fondini a saldare e in gomma - nodo TZ

*Reverse closure kit for 2-leaf window weld-on fitting and rubber fitting - TZ profiles*

AC1714GZ acciaio zincato | galvanized steel  
AC1714CZ acciaio corten | corten steel  
AC1714I acciaio inox | stainless steel  
AC1714B ottone naturale | natural brass

### AC 1235

Coppia limitatori per apertura a vasistas  
H min = 360 mm  
Peso massimo anta: 70 kg

*Friction stays for bottom-hung windows  
H min = 360 mm  
Maximum leaf weight: 70 kg*

### AC 1716

Guarnizione d'angolo vulcanizzata per GE1701

*Vulcanised corner gasket for GE1701*

### AC 1237.

Cerniera a stilo ad avvitare con viti e rinforzi per finestra  
Peso massimo anta: 180 kg

*Hinge to be screwed with screws and strengtheners for window  
Maximum leaf weight: 180 kg*

AC1237IZ inox verniciabile | paintable stainless steel  
AC1237SB inox scotch brite | scotch brite st. steel  
AC1237L inox lucido | polished stainless steel  
AC1237B inox brunito | burnished stainless steel

AISI 304

### AC 2608

Clips per fissaggio fermavetri P.2015 - P.2028 - P.2038

*Clips for glazing bead  
P.2015 - P.2028 - P.2038*

### AC 1356

Meccanismo DK esterno per maniglie "Vitruvio"

*External tilt and turn mechanism for "Vitruvio" handles*

### AC 2632/C

Cerniera registrabile a due ali in acciaio zincato a saldare | Ø 16  
Peso massimo anta: 100 kg

*Adjustable weld-on hinge in galvanized steel | Ø 16  
Maximum leaf weight: 100 kg*

**AC 5002**

Coppia di maniglie per porta in acciaio inox completa di viti

*Pair of stainless steel door handles with screws*

**AG 1224**

Cerniera a tre ali ad avvitare per vasistas  
Peso massimo anta: 70-100 kg

*Screw-on hinge for bottom-hung window  
Maximum leaf weight: 70-100 kg*

**AC 5037**

Maniglia con incontro in lega colore nero per apertura a sporgere  
Completa di viti di fissaggio

*Handle with black alloy plate for projecting opening  
With fixing screws*

**AG 1224 ..**

Kit copertine in plastica per cerniere AG 1224

*Plastic cover for hinges AG 1224*

AG1224/C argento | matt silver  
AG1224MC marrone | brown  
AG1224BC bronzato chiaro | light bronze plated  
AG1224BO ottonato opaco | matt brass plated  
AG1224OL ottonato lucido | brass plated  
AG1224ST inox | stainless steel  
AG1224GR grigio | gray  
AG1224NI nichelato | nickel  
AG1224WB bianco RAL 9001 | white RAL 9001  
AG1224WC bianco RAL 9010 | white RAL 9010

**AC 5056**

Maniglia DK per cremonese in acciaio inox scotch brite per P.1233  
Completa di viti

*DK handle for cremone bolt in scotch-brite stainless steel for P.1233  
With fixing screws*

**AG 1385**

Limitatore di apertura frizionato per meccanismi A/R a vista  
Solo per meccanismi EASY

*Friction stay for tilt-turn mechanism, visible hinges  
Only for EASY mechanism*

**AC 6023**

Cerniera registrabile a due ali in acciaio zincato a saldare | Ø 20  
Peso massimo anta: 200 kg

*Adjustable weld-on hinge in galvanised steel | Ø 20  
Maximum leaf weight: 200 kg*

**AG 1386**

Limitatore di apertura frizionato per meccanismi A/R a scomparsa  
Solo per meccanismi EASY

*Friction stay for tilt-turn mechanism, concealed hinges  
Only for EASY mechanism*

### AG 6530

Limitatore di corsa per  
meccanismi A/R

*Opening limiter on tilt&turn  
mechanism*

### CV 5001.

Vite per boccola fermavetri

*Screw for glazing bead bushing*

TPS 4.2x16 mm

### CV 5012.

Boccola per fermavetri

*Bushing for glazing bead*

CV5001 acciaio zincato | *galvanized steel*  
CV5001I acciaio inox | *stainless steel*

CV5012 acciaio zincato | *galvanized steel*  
CV5012I acciaio inox | *stainless steel*

**Distinta di taglio e lista componenti | Cutting list and components list**

Le distinte di taglio e le liste accessori individuate per le diverse tipologie sono state redatte per un serramento tipo.

E' compito dei tecnici specializzati delle ditte produttrici analizzare criticamente tali indicazioni al fine di verificare la compatibilità del tipo e numero di accessori previsti con il serramento oggetto della commessa reale.

*The cutting and hardware lists, which have been identified for the different typologies, have been produced for a standard window.*

*The specialized technicians of the window manufacturers will have to critically analyze such information in order to verify the compatibility of both the type and the number of accessories provided with the window object of the real order.*

**Distinta di taglio e lista componenti | Cutting list and components list**

Le distinte di taglio e le liste accessori individuate per le diverse tipologie sono state redatte per un serramento tipo.  
E' compito dei tecnici specializzati delle ditte produttrici analizzare criticamente tali indicazioni al fine di verificare la compatibilità del tipo e numero di accessori previsti con il serramento oggetto della commessa reale.

*The cutting and hardware lists, which have been identified for the different typologies, have been produced for a standard window.  
The specialized technicians of the window manufacturers will have to critically analyze such information in order to verify the compatibility of both the type and the number of accessories provided with the window object of the real order.*

**La tabella seguente va attentamente letta prima del taglio dei profili | The following table should be carefully read before the profiles cutting**

In essa è riportata la misura da considerare nella distanza tra telaio anta e telaio fisso nella produzione di finestre in funzione della tipologia, del tipo di cerniera e della larghezza delle ante da produrre.

*It shows the measurement to follow between the leaf and the fixed frame in the production of windows depending on the typology, the hinge type and the width of the leaf to be produced.*

			larghezza anta (cava ferramenta in mm) leaf width (hardware slot in mm)

The specialized technicians of the window manufacturers will have to critically analyze such information in order to verify the compatibility of both the type and the number of accessories provided with the window object of the real order.*

**La tabella seguente va attentamente letta prima del taglio dei profili | The following table should be carefully read before the profiles cutting**

In essa è riportata la misura da considerare nella distanza tra telaio anta e telaio fisso nella produzione di finestre in funzione della tipologia, del tipo di cerniera e della larghezza delle ante da produrre.

*It shows the measurement to follow between the leaf and the fixed frame in the production of windows depending on the typology, the hinge type and the width of the leaf to be produced.*

			larghezza anta (cava ferramenta in mm) leaf width (hardware slot in mm)	
			< 480	> 480
Vasistas	AG 1264	aria - gap	6	5
Bottom hung	AG 1274	riscontro - strike	std	std

**NB**  
gli incontri ribassati devono essere installati  
solamente sul lato cremonese  
*reduced strikes should be installed only on  
cremone vertical side*

AC1235 H max = 800 mm  
AG1264-74 H max = 1200 mm

\* vedi tabella 4.1.16  
see chart 4.1.16

\*\* solo con profili ottone  
only with brass profiles

**Ottone**

Utilizzare le squadrette di allineamento, sigillare tutte le superfici di contatto tra i profili che non vanno saldate. Saldare a TIG a punti le zone indicate.

**Brass**

Use corner brackets, seal all surfaces in touch with profiles that are not to be seam-welded. Spot weld (TIG) the marked areas.

**Acciaio zincato - Acciaio Corten - Acciaio inox**

Saldare in continuo le superfici di contatto.

**Galvanised steel - Cor-ten steel - Stainless steel**

Seam-weld all contact surfaces.

Porta | Door

- 1) spessore portante | carry shim
- 2) spessore distanziatore | compensation shim

Note / Note

- La larghezza degli spessori è almeno pari o maggiore (+2 mm) dello spessore del vetro installato.
- La posizione degli spessori deve essere garantita dall'utilizzo di materiale adeguato che ne eviti lo spostamento.
- The shims' width is the same or greater (+2 mm) than the thickness of the glass installed.
- The position of the shims has to be ensured by using appropriate material that avoids creeping.

\* vite TSP 4.2 x 16 mm non inclusa - screw TSP 4.2 x 16 mm not included

\*\* spessori vetro non inclusi - glass thickness not included

area to cut and weld after the corner joint

Nota: i fondini sono forniti di dimensioni maggiori da rifilare dopo la saldatura.  
Note: the ending caps for T-Z joint are furnished in larger dimensions and should be trimmed down after welding.

Nota: i fondini sono forniti di dimensioni maggiori da rifilare dopo la saldatura.  
Note: the ending caps for T-Z joint are furnished in larger dimensions and should be trimmed down after welding.

- 1) Asportare il poliammide.
- 1) Remove the polyamide.
- 2) Tagliare la guarnizione GE1704 a 50 mm. dal filo esterno del polliamide.
- 2) Cut the gasket GE1702 at 50 mm from the end thread of polyamide.
- 3) Asportare la parte dell'estruso GU1702 che interferisce con il fondino A.
- 3) Remove the part of the extrudate GU1702 that interferes with the rubber ending cap A.
- 4) Posizionare il fondino di gomma ed incollarlo alla guarnizione GE1701 a mezzo di colla ciano-acrilica.
- 4) Position the rubber ending cap and stick it to the gasket GE1701 with cyano-acrylic glue

Particolare A - Detail "A"

Tagliare la guarnizione per 20 mm | Cut the gasket to 20 mm

- 1) Eseguire i fori come da disegno .
- 2) Posizionare lo scarico acqua e sigillare fissare con viti in dotazione M3x12.
- 3) Posizionare il supporto della guarnizione di giunto GU1702 e fissarlo con viti TC 3.5x13 (non fornita).
- 4) Sigillare la guarnizione di giunto GE1701 con il supporto GU1702 per tutta lunghezza e per 200 mm. in altezza sul telaio.
- 5) Posizionare la guarnizione di giunto centrale GE1701 e gli angoli vulcanizzati AC1716, incollare gli angoli alla guarnizione a mezzo di colla ciano-acrilica.

- 1) Drill the holes according to drawing .
- 2) Install the water drip accessory, seal and secure with the supplied M3x12 screw.
- 3) Position the support of the weather strip GU1702 and anchor it with the double-sided adhesive tape provided and screws TC 3.5x13 (not provided).
- 4) Seal the weather strip GE1701 with the support GU1702 for the whole length and for 200 mm vertically on the frame.
- 5) Install the central weather strip GE1701 and the vulcanised corners AC1716, glue the corners to the weather strip using cyanoacrylate glue.

- ③ Vite TC 3.5x13 (non fornita)
- ③ Screw TC 3.5x13 (not provided)

- ④ sigillare per tutta la lunghezza la base inferiore e per 200 mm. in altezza il telaio.
- ④ Seal the lower frame for its whole length and for 200 mm vertically.

sigillare il perimetro dello scarico acqua  
seal the perimeter of water drip

incollare gli angoli vulcanizzati AC1716 alla guarnizione con colla cianoacrilica  
Glue the vulcanised corner AC1716 to the gasket using cyanoacrylate glue

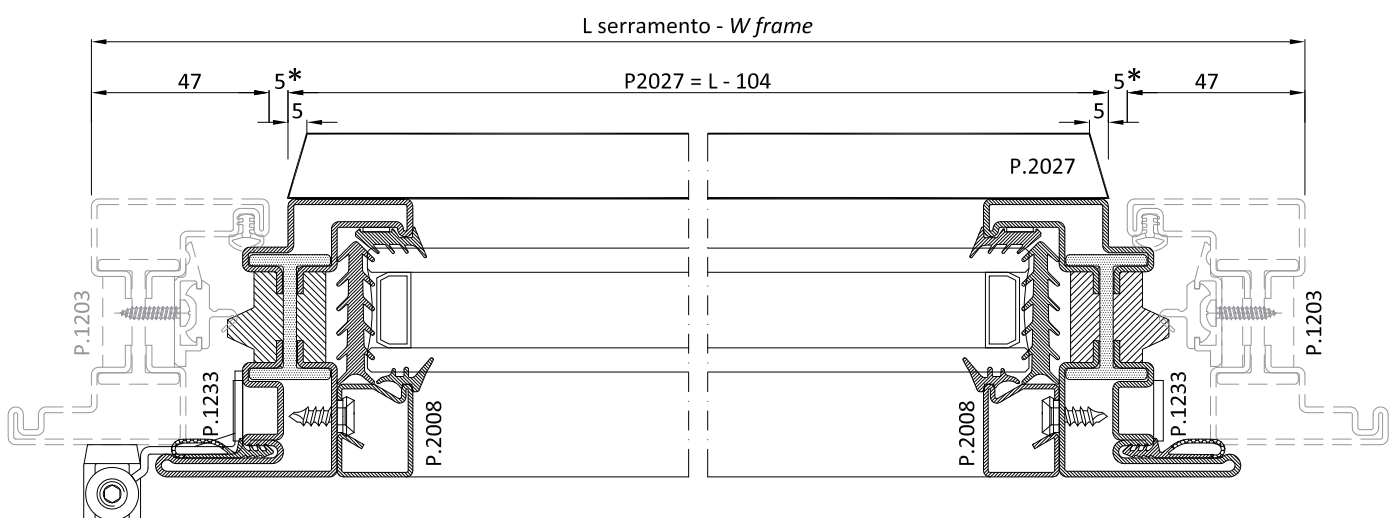

- ④ sigillare per tutta la lunghezza la base inferiore e per 200 mm. in altezza il telaio.
- ④ Seal the lower frame for its whole length and for 200 mm vertically.

Peso max. per anta 180 kg  
Max. weight for leaf: 180 kg

\* Cerniera aggiuntiva per peso anta > di 180 kg - peso max 200 kg  
Additional hinge for leaf weight > 180 kg - max weight 200 kg

- \* Per cerniere intermedie allineare i 4 fori di fissaggio della cerniera con i fori del rinforzo A  
- \* For intermediate hinges align the 4 anchoring holes of the hinge with the holes of reinforcement A

LAVORAZIONE VALIDA ANCHE PER CERNIERE INTERMEDIE /  
AGGIUNTIVE

Dopo aver tagliato montanti e traversi dell'anta e del telaio ed aver effettuato le lavorazioni delle squadrette, forare con punta  $\varnothing 5,5$  il profilo "telaio" ed il profilo "anta" come indicato nel disegno.

Prima di assemblare il telaio e l'anta inserire i rinforzi "A" - "B" e bloccarli con le viti in dotazione.

Effettuare le medesime lavorazioni per la cerniera superiore e per le eventuali posizioni intermedie.

Forare la squadretta AC1207I di assiemaggio dell'anta e filettare i fori M5.

Dopo aver assemblato definitivamente l'infisso, vetri compresi, registrare le cerniere e bloccare l'elemento femmina della cerniera all'anta con la spina  $\varnothing 6$  in dotazione

TOOLING VALID ALSO FOR INTERMEDIATE/ADDITIONAL  
HINGES

After cutting mullions and transoms for the wing and frame and carrying out the tooling with the corner brackets, drill the holes in the frame and wing profiles as indicated in the drawings. Use a  $\varnothing 5.5$  drill bit.

Before assembling the frame and the wing, insert the reinforcements "A" - "B" and secure them with the screws provided.

Carry out the same procedures for the upper hinge and for any other mid positions.

Drill a hole in the AC1207I assembling bracket for the wing and thread the M5 holes.

After assembling the door/window, glass included, adjust the hinges and secure the female element of the hinge to the wing with the  $\varnothing 6$  pin provided.

Viti TSP 4.2x13 inox  
Stainless steel  
screws TSP 4.2x13

PER ANTE CON PESO SUPERIORE A 180 kg

Eeguire sulla cerniera due fori svasati  $\varnothing 4,5$  dopo aver assemblato definitivamente l'infisso, vetri compresi, registrare le cerniere e bloccare con la spina  $\varnothing 6$  in dotazione l'elemento femmina sull'anta e l'elemento maschio al telaio con due viti TPS 4,2x13

FOR WINGS HEAVIER THAN 180 kg

After assembling the door/window, glass included, drill 2  $\varnothing 4.5$  countersunk holes in the hinge; adjust the hinges and secure the female element of the hinge to the wing with the  $\varnothing 6$  pin provided and the male element to the frame with 2 TPS 4.2x13 screws.

Peso max. per anta 80 kg  
Max. weight for leaf: 80 kg

\* Cerniera aggiuntiva per peso anta > di 80 kg - peso max 100 kg  
Additional hinge for leaf weight > 80 kg - max weight 100 kg

Posizionare le cerniere come da disegno saldandole sui alti.  
Position the hinges as in the drawing, welding them on the sides.

±2 mm.

**Generalità**

I sistemi progettati e sviluppati dalla Secco Sistemi sono idonei per la fabbricazione di un'ampia gamma serramenti, vetrate e facciate in metallo. I sistemi sono rivolti ad aziende esperte e professionali nel campo della lavorazione dei metalli e della costruzione di serramenti e facciate, che sono a conoscenza delle normative di riferimento, delle direttive e delle specifiche tecniche del fornitore del sistema, nonché delle fondamentali regole dell'arte per la produzione e installazione di questi manufatti. Tutta la documentazione tecnica fornita costituisce un riferimento per i tecnici qualificati delle aziende al fine di indicare le modalità per la costruzione dei prodotti. In ogni caso i tecnici qualificati devono analizzare criticamente le indicazioni riportate per verificarne la loro adeguatezza per ogni singola commessa in relazione ai carichi, agli stress previsti e alle condizioni di messa in opera, essendo impossibile riportare in questa documentazione tutte le varianti riscontrabili nei progetti reali.

**Tolleranze**

EBE 65 prevede l'accoppiamento tra i telai esterni e le ante apribili con distanza di 12 mm su porte e 15 mm su finestre. Per garantire il corretto funzionamento degli accessori e delle guarnizioni le lavorazioni devono essere eseguite con particolare attenzione e precisione: si consiglia di mantenere la tolleranza per la dimensione degli elementi apribili compresa tra +0/-2 mm e la tolleranza per il sormonto degli stessi compresa tra +0/+1 mm.

**Taglio/Lavorazioni**

I profili EBE 65 in acciaio zincato, acciaio inox e corten possono essere tagliati con le normali troncatrici a disco utilizzate per i tubolari in acciaio, mentre per il taglio dei profili in ottone possono anche essere utilizzate troncatrici per le serie di alluminio. Vista la loro particolare dimensione e forma si consiglia di utilizzare le ganasce di taglio previste dal sistema per assicurare una perfetta stabilità dei profili durante il taglio. La verifica del taglio, sia per la sezione inclinata a 45° che per la sezione verticale a 90°, dovrebbe garantire una tolleranza compresa tra -1°/+1°. Tutte le lavorazioni devono essere eseguite con il rispetto della seguente nota tecnica ed eventuali modifiche concordate con l'ufficio tecnico Secco Sistemi.

**Saldatura**

I profili EBE 65 possono essere saldati con i tradizionali sistemi di saldatura (MIG/MAG, TIG), con un idoneo sistema di lubrificazione/refrigerazione e utilizzando le istruzioni presenti nella presente nota tecnica ed evitando di saldare in prossimità della giunzione a taglio termico. L'eventuale riscaldamento del poliuretano libera sostanze gassose a base di aldeidi e CO: per tale ragione si consiglia di saldare con gli appositi DPI previsti e in zone con sufficiente areazione e in presenza di sistema per l'evacuazione dei fumi. I profili in corten devono essere saldati con apposito filo in corten mentre per i profili in ottone si può utilizzare un filo CuSi3. Si raccomanda di saldare in profondità e senza lasciare fori e porosità le aree in contatto, di lisciare e pulire adeguatamente la superficie saldata per garantire una corretta resistenza strutturale all'angolo e permettere una successiva verniciatura senza imperfezioni estetiche visibili (pori e ondulazioni).

**Verniciatura/Brunitura**

I profili EBE 65 sono stati progettati per essere verniciati a polveri in forni con temperature di 180°C per 25 minuti. La zona a taglio termico in poliuretano non è in grado di accogliere con sufficiente adesione le polveri poliesteri e perciò si consiglia di ricoprire tali zone, nelle sole parti destinate ad essere in vista, con apposite pellicole adesive idonee al passaggio in forno.

I telai prima della verniciatura o della brunitura devono essere forati come da istruzioni presenti in questa nota tecnica per permettere la fuoriuscita dei liquidi utilizzati durante il pretrattamento delle superfici. All'uscita del forno di polimerizzazione della polvere i telai vanno rimossi accuratamente e adagiati in posizione piana sino al loro completo raffreddamento. Si consiglia di seguire il ciclo di pretrattamenti e verniciatura presente nella documentazione Secco Sistemi.

**Vetrazione**

Il sistema di fissaggio del vetro prevede l'utilizzo di fermavetri agganciati all'interno tramite clips o boccole interne e mandati in pressione con l'incastro dell'apposita guarnizione interna; all'esterno è previsto l'utilizzo di una guarnizione perimetrale continua giuntata e sigillata in un angolo superiore o di una guarnizione butilica di fondo giunto e un cordolo di silicone applicato secondo le prescrizioni tecniche del fornitore del prodotto. Per il corretto funzionamento del sistema si suggerisce di verificare la perfetta compressione delle guarnizioni interne del fermavetro.

**Installazione**

La corretta installazione deve garantire il mantenimento delle performance dichiarate nella marcatura CE e testate in laboratorio. Si consiglia di progettare un corretto numero di fissaggi in relazione al tipo di contro telaio/muratura esistente e alle dimensioni degli elementi da installare. Al termine dell'installazione si verifichi il corretto funzionamento del serramento (facilità di apertura/chiusura, stabilità dell'anta aperta a riposo, etc.), il rispetto delle fughe e del sormonto tra ante apribili e telai fissi, il regolare posizionamento delle guarnizioni e delle sigillature, il drenaggio del giunto aperto e la mancanza di difetti estetici sulle superfici dei telai e del vetro.

**General information**

The systems designed and developed by Secco Sistemi are suitable for the manufacturing of a wide range of doors, windows and shutters, as well as faces or facades in metal. The systems are designed for professional and expert companies in the metal-working sector and that of construction of doors, windows, shutters and facades. These companies are well aware of the specific regulations and the directions and technical specifications of the system supplier, and also the fundamental rules of the art of manufacturing and installing these products. All the technical documentation provided furnishes a source of reference for the qualified technicians of the companies, giving indications as to how the products should be constructed. These qualified experts must critically analyse the indications to verify their adequacy for each single order in terms of load, stress and conditions of installation, particularly as this documentation cannot provide for all the different variations that may be found in projects.

**Tolerance**

EBE 65 is made by coupling external frames with the opening leaves with a distance of 12 mm on doors and 15 mm on windows. To ensure the correct functioning of hardware and gaskets, tooling must be performed with great care and precision. It is advised to keep the tolerance between  $+0/-1$  mm for opening elements and between  $+0/+0.5$ mm for their overlapping area.

**Cut / Processing**

EBE 65 profiles in galvanized steel, stainless steel and corten steel can be cut with normal saws, like those used for steel pipes. EBE 65 profiles in brass can be cut with saws used for aluminium. Given their dimension and size, it is recommended to use the cutting jaws advised to ensure perfect stability during the cutting procedure. In order to verify the correctness of the cut, the tolerance of both the  $45^\circ$  and the  $90^\circ$  sections must be between  $-1^\circ/+1^\circ$ . All Tooling must be performed in line with this technical note and any variations agreed with Secco Sistemi's Technical Department.

**Welding**

EBE 65 profiles can be welded with the traditional systems (MIG/MAG, TIG), with an appropriate lubricating/cooling system and according to the instructions as per this technical note. Avoid welding near the thermal break joint. Heating any polyurethane items releases gaseous substances containing aldehydes and CO. For this reason it is recommended to weld with the special Personal Protective Equipment suggested and in areas with sufficient ventilation and fume-disposing systems. The corten profiles must be welded with special corten wire, while for profiles in brass a CuSi3 wire can be used. It is recommended to weld in depth, to avoid leaving any holes or porosity on the surfaces and to smooth and clean the welded surface thoroughly. This is to guarantee a proper structural resistance at the corner and to allow for later painting without any visible imperfections (pores and ripples).

**Painting/Burnishing**

EBE 65 profiles have been designed to be painted with the powder coating technique in industrial ovens at temperatures of  $180^\circ\text{C}$  for 25 minutes. The thermal break area is not designed to absorb polyester powders and therefore it's advised to cover the visible areas with appropriate industrial-oven-resistant adhesive films (SA1024 and SA1033). Holes must be drilled in the frames (as per instructions in these technical specifications) before painting or burnishing in order to allow drainage of any liquid used as a pre-treatment of the surfaces. Once out of the oven, the frames must be accurately removed and laid in a horizontal position until complete cooled.

It is advised to follow pre-treatment and painting cycles as outlined in the Secco Sistemi documentation.

**Glass application**

Glass needs to be secured internally and externally. Internally, glazing beads must be used together with clips or bushings and then secured by pressure with the appropriate gasket; externally a continuous perimetrical gasket should be applied, jointed and sealed in a top corner or a butyl seal and a thread of silicone that must be applied according to the product supplier's technical specifications. In order to ensure the correct functioning of the system, it is recommended to verify the proper pressurization of the internal glazing bead gaskets.

**Installation**

Proper installation must guarantee that the performances declared in the EC marking and verified in the lab will remain constant. It is advised to arrange a correct series of set ups with reference to the existing type of subframe/brickwork and to the dimensions of the elements to install. Once installation is completed, the proper functioning of the window/door (easiness of opening/closing, stability of the open leaf, etc.), should be tested as well as the correctness of joints and overlapping areas between opening leaves and fixed frames, the proper positioning of gaskets and seals, the drainage of frames with weep system and the absence of any aesthetic defects on the frame and glass surfaces.

**Troncatrice**caratteristiche minime della macchina

- Potenza: 1.8 – 2.5 kW;
- Possibilità di taglio a 45° nei due sensi e a 90°;
- Velocità di taglio ideali: 15-30 giri/min per acciaio inox;  
60-90 giri/min per acciaio zincato e corten,  
90 giri/min o superiori per bronzo (OT/67);
- Capacità di taglio: 150 x 80 mm a 90°;  
100 mm taglio a 45°.

caratteristiche della lama

- Lama da 350 mm con spessore 2.5 mm;
- N° denti: - 300 per tagli a 45°;  
- 350 per tagli a 90°;
- Materiale: HSS (verificare materiali di commercio con finiture che migliorano la durata delle lame).

NB: è possibile tagliare la lega OT/67 con le stesse macchine dell'alluminio.

**Pantografo**caratteristiche minime della macchina

- Mandrino con velocità regolabile 2000-11000 giri/min (per un corretta lavorazione su acciaio inox è necessario operare a n° ridotto di giri < 4000);
- Struttura in ghisa adatta al taglio acciaio;
- Testata pesante per limitare le vibrazioni;
- Chiusura del profilo da lavorare con morse.

caratteristiche minime delle frese

- Materiale: HSS (verificare materiali di commercio con finiture che migliorano la durata delle frese);
- Frese a 4 denti;
- Frese con diametro 5 mm per le lavorazioni di scasso.

**Forature**montaggio componenti di chiusura e movimentazione sui profilati in acciaio inox

- Forare con punte da trapano HSS del diametro indicato sulla corrispondente tavola tecnica;
- Maschiare il foro con vite autofilettante zincocromata avente diametro corrispondente alla vite inox fornita nel kit con l'articolo da montare;
- Posizionamento e fissaggio definitivo dell'articolo con le viti inox in dotazione.

fresatura di cave e asole sui profili inox

- Adoperare macchine (pantografi o fresatrici) adeguate alle lavorazioni dell'acciaio;
- Regolazione del numero di giri max (3000 giri/1');
- Impiego di frese di diametro massimo di 8mm a 4 pale in acciaio HSS;
- Abbondare con la lubrificazione, concentrata sull'utensile;
- Ridurre l'avanzamento fino ad accertare un taglio il più regolare possibile;
- È normale un'usura accelerata dell'utensile.

**Cutter**Minimum requirements for the use of the machine

- Power: 1.8 – 2.5 kW;
- Possibility of cutting at 45° in both directions and at 90°;
- Ideal cutting speed: 15-30 rmp for stainless steel;  
60-90 rmp for galvanised and corten steel;  
90 rmp or higher for bronze (OT/67);
- Cutting capability: 150 x 80 mm at 90°;  
100 mm cut at 45°.

Blade specifications

- 350 mm blade with a 2.5 mm thickness;
- Number of teeth: 300 for 45° cut;  
350 for 90° cut;
- Material: HSS (please verify availability of longer lasting material on the market).

Note: OT/67 alloy can be cut with machines made for aluminum.

**Phantograph**Minimum requirements for the use of the machine

- Mandrel with a 2000-11000 rmp adjustable speed (for a proper stainless steel processing a slower speed is required i.e.<4000 rpm);
- Machine should be made of cast iron suitable for steel cutting;
- Heavy head in order to limit vibrations;
- Secure the profile to be processed in jaws.

Minimum requirements for the use of a milling machine

- Material: HSS (please verify availability of longer lasting material on the market);
- Use a 4-tooth milling machine;
- Use a milling machine with a 5-mm diameter for groove processing.

**Drilling**How to mount closing and moving components on a stainless steel profile

- Use a HSS drill. The diameter of the drill is indicated in the technical note;
- Thread the hole with self-threading zinc-plated screws with the same diameter as the stainless steel screw provided with the kit;
- Position and secure the item with the stainless steel screws provided.

Milling slots and loops in the profiles

- Use machines designed for steel processing (pantographs or milling machines);
- Max rpm setting (3000 rpm);
- Use milling machines with a diameter no bigger than 8 mm and with 4 HSS steel blades;
- Exceed with lubrication, mainly on the machine;
- Processed slowly until the milling is as clean as possible;
- Expect a fast wearing of the machine.

**MATERIALI****ACCIAIO INOX****Materiale**

Profilati ricavati da nastro di lamiera di acciaio inox laminato a freddo pre-trattato industrialmente per garantire la massima qualità e uniformità.

**Caratteristiche fisiche**

AISI 316L Marino (X2 CrNiMo 17-12-2)

**Norme di riferimento**

EN 10088-2; EU 114

**Trattamenti superficiali**

Finitura satinata: ottenuta su nastro AISI 304 con finitura superficiale 2B con successiva satinatura con abrasivi a grana 240-280.

Finitura lucida: ottenuta su nastro AISI 316L (marino) con finitura superficiale 2R, riflettività 53% e successiva lucidatura a specchio.

Finitura Scotch Brite: ottenuta su nastro AISI 316L (marino) con finitura superficiale 2B con successiva spazzolatura Scotch Brite.

**ACCIAIO COR-TEN****Materiale**

Profilati ottenuti da nastro in acciaio altoresistenziale, autopassivante (che un tempo veniva commercializzato con il nome Cor-Ten) tale da formare, se esposto all'aria, uno strato di ossido uniforme e stabile che, ricoprendo la lamiera, ne arresta la corrosione atmosferica.

**Caratteristiche fisiche**

Fe 510 X (C max % 0,12; Si % 0,25-0,75; Mn % 0,20-0,50; P % 0,07-0,15; Cu % 0,25-0,55; Cr % 0,30-1,25; Ni max % 0,65)

**Norme di riferimento**

EN 10149

**Trattamenti superficiali**

Dopo la profilatura il materiale viene immerso in speciali bagni ossidanti tali da accelerare la formazione dello strato protettivo. Raggiunta la tonalità desiderata della superficie si procede ad una ceratura di stabilizzazione del materiale.

**ACCIAIO ZINCATO VERNICIATO****Materiale**

Profilati ottenuti da nastro in lamiera di acciaio zincato a caldo sistema Sendzimir finitura skinpassata

**Caratteristiche fisiche**

FeP02 GZ 200 (copertura di zinco pari a 200gr/m<sup>2</sup> per faccia)

**Norme di riferimento**

UNI EN 10142/3/7; EURONORM 143

**Trattamenti superficiali per la verniciatura**

La preparazione del supporto zincato si effettua tramite i processi di sgrassaggio, decapaggio e lavaggio in acqua. Segue l'applicazione di uno strato di zinco per fosfatazione seguito da lavaggi in acqua demineralizzata. Infine applicazione della mano a finire con polveri poliestere cotte in forno a 180 °C per 25 minuti.

**LEGA DI RAME OT67****Materiale**

Profilati ottenuti da nastro di Lega di Rame OT67 laminato a freddo rincrudito allo stato grezzo.

**Caratteristiche fisiche**

Cu Zn 33 CW 506L (OT 67, 67% rame)

**Norme di riferimento**

EN 1652:1999

**Trattamenti superficiali**

Finitura brunita: dopo la profilatura viene eseguita una ricottura di distensione, quindi la pulitura meccanica con abrasivo e la successiva brunitura per immersione con liquido brunitore; il profilo viene poi lavato e asciugato ed infine protetto mediante trattamento con olio di vaselina.

Finitura lucida: dopo la profilatura viene eseguita una ricottura di distensione e successivamente la lucidatura a specchio.

**MATERIALS****STAINLESS STEEL****Materials**

Sections processed out of the cold-rolled coils, industrially pre-treated for utmost quality and uniformity.

**Physical features**

AISI 316L Marino (X2 CrNiMo 17-12-2)

**Norms of reference**

EN 10088-2; EU 114

**Surface treatment**

Satined: obtained on AISI 304 coil 2B pre-finish with post-treatment by means of abrasive 240-280 in grain size.

Polished: obtained on AISI 316L (marine) coil pre-finish with 2R surface finish, 53% reflectivity, and mirror post-polish.

Scotch Brite: obtained on AISI 316L (marine) coil 2B pre-finish with Scotch-Brite post-scrubbing.

**CORTEN STEEL****Materials**

Sections processed out of highly resistant self-oxidising steel coils – once traded under the name Cor-Ten. If exposed to the open air, it produces a uniform protective layer that reduces weather corrosion.

**Physical features**

Fe 510 X (C max % 0,12; Si % 0,25-0,75; Mn % 0,20-0,50; P % 0,07-0,15; Cu % 0,25-0,55; Cr % 0,30-1,25; Ni max % 0,65)

**Norms of reference**

EN 10149

**Surface treatment**

After forming, sections are plunged into a special oxydising bath to catalyze formation of the protective coating. Once the desired tone obtained, sections are stabilized by a wax coating.

**GALVANIZED AND PAINTED STEEL****Materials**

Sections processed out of hot galvanized steel coils, band "Sendzimir, skinpassed finishing.

**Physical features**

FeP02 GZ 200 (with zinc coating of 200 gr/sq x m on both faces)

**Norms of reference**

UNI EN 10142/3/7; EURONORM 143

**Pre-painted surface treatment**

The preparation of a galvanised surface is made through several processes: degreasing, pickling and washing. A coating of zinc is then applied through a phosphatising process followed by rinses in demineralised water. A final coat is then applied with polyester powders baked at 180 °C for 25 minutes.

**COPPER ALLOY OT67****Materials**

Sections processed out of copper alloy coils, industrially cold-rolled.

**Physical features**

Cu Zn 33 CW 506L (OT 67, 67% copper e 33% zinc)

**Norms of reference**

EN 1652:1999

**Surface treatment**

Burnished finish: after forming, the product is submitted to stress relieving, then to mechanical cleaning with abrasive products and ultimately to burnishing by plunging into a burnishing solution. It is then washed and dried and protected with a vaseline coating.

Glossy finish: after forming, the product is submitted to stress relieving and then mirror-like polished.
